

Lab 1.2: Demo Hook and Delivery Practice

Hands-on Lab | Module 1, Lesson 2 | Company: SkillBoost Corporate Training

Introduction

This hands-on lab introduces learners to the practical use of demo scripting and on-camera delivery to capture an audience in the opening seconds of a presentation. In this lab, we'll focus on the start of a demo, when a strong opening determines whether the audience stays engaged or loses interest. By the end of this activity, learners will be able to write the opening of a demo script and deliver it on camera with strong eye contact and clear vocal delivery.

Learning Objectives

After completing this lab, you will be able to:

- Write a demo opening that hooks the audience in the first 30 seconds.
- Apply virtual delivery techniques for camera presence and vocal clarity.
- Demonstrate effective eye contact and clear vocal delivery during a slide presentation.

Tools and Resources Required

Demo Script Template and Virtual Presentation Checklist (downloadable resource).

The reading: Demo and Virtual Delivery Best Practices.

A device with a camera to record a short video.

Scenario

You are a Sales Representative at SkillBoost Corporate Training, a company that delivers professional development and skills programs for businesses.

Your company is preparing to present its leadership development program to a group of HR directors, and the opening seconds of the demo decide whether this audience leans in or tunes out. Your job is to write the opening of the demo script and practice delivering it on camera, using strong eye contact and clear vocal delivery to earn the audience's attention from the first line.

Instructions

Step 1: Understand the audience

Review the audience: HR directors evaluating a leadership development program.

Step 2: Create the opening 30 seconds

Using the Demo Script Template, write the opening 30 seconds of the demo.

Lead with the audience's most pressing problem, not with a product feature.

Step 3: Deliver and record your delivery

Record a 1-minute video presenting one slide that supports your opening.

Focus on looking into the camera lens and speaking with clear, varied vocal delivery.

Step 4: Evaluate and reflect

Review your recording against the Virtual Presentation Checklist and note one thing you did well and one thing to improve.

Expected Outcome

Your completed work should include the following:

- A short demo script covering the opening 30 seconds.
- A 1-minute video recording presenting a slide.
- A brief self-review noting one strength and one improvement.

Summary

Congratulations! You have completed this hands-on lab, exploring how to open a demo and deliver it with presence. You've learned how to write a demo opening built around the audience's problem and to deliver it on camera with clear presence and vocal control. Strong openings and confident delivery are what keep a virtual audience engaged from the first moment.
