

Lab 3.2: Bundle and Business Case Lab

Hands-on Lab | Module 3, Lesson 2 |
Company: SkillBoost Corporate
Training

Introduction

Having identified an expansion opportunity, you now package it. SkillBoost wants to bundle its leadership training with team communication workshops for management teams. In this lab, you will create a two-product bundle, apply a pricing psychology principle, and draft the core value proposition and key ROI metrics for the bundle.

Learning Objectives

After completing this lab, you will be able to:

- Design a two-product bundle for a defined audience.
- Apply a pricing psychology principle to the bundle.
- Draft a value proposition and key ROI metrics for the bundle.

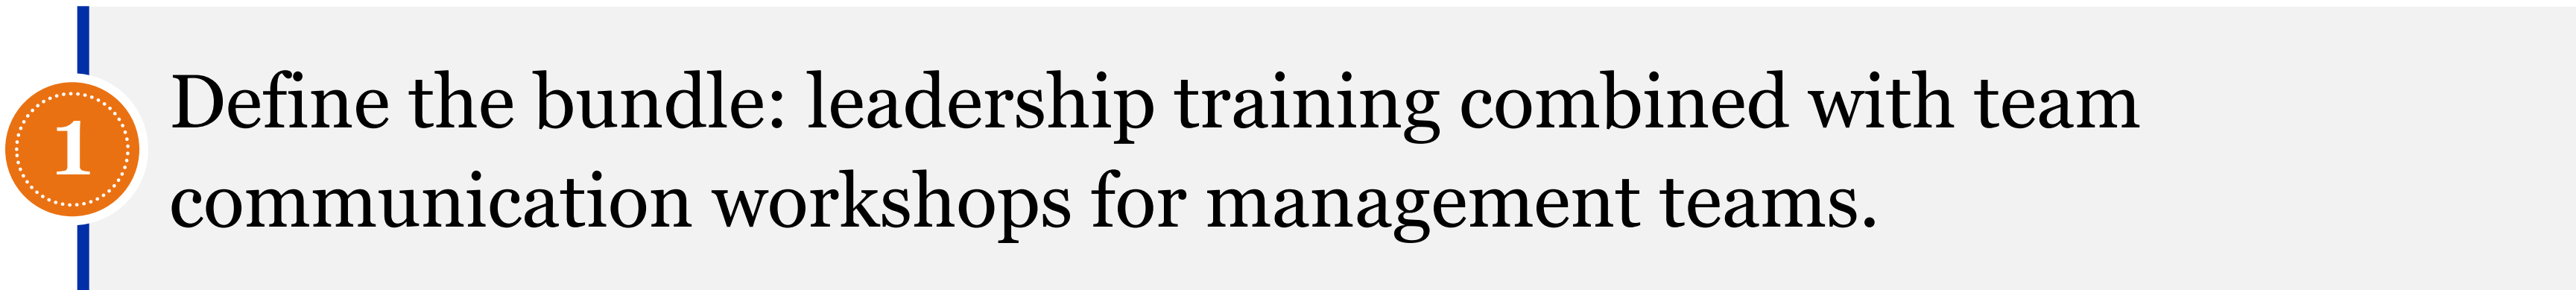

Tools and Resources Required

ROI Proposal Template and Bundle Design Calculator
(downloadable resource).

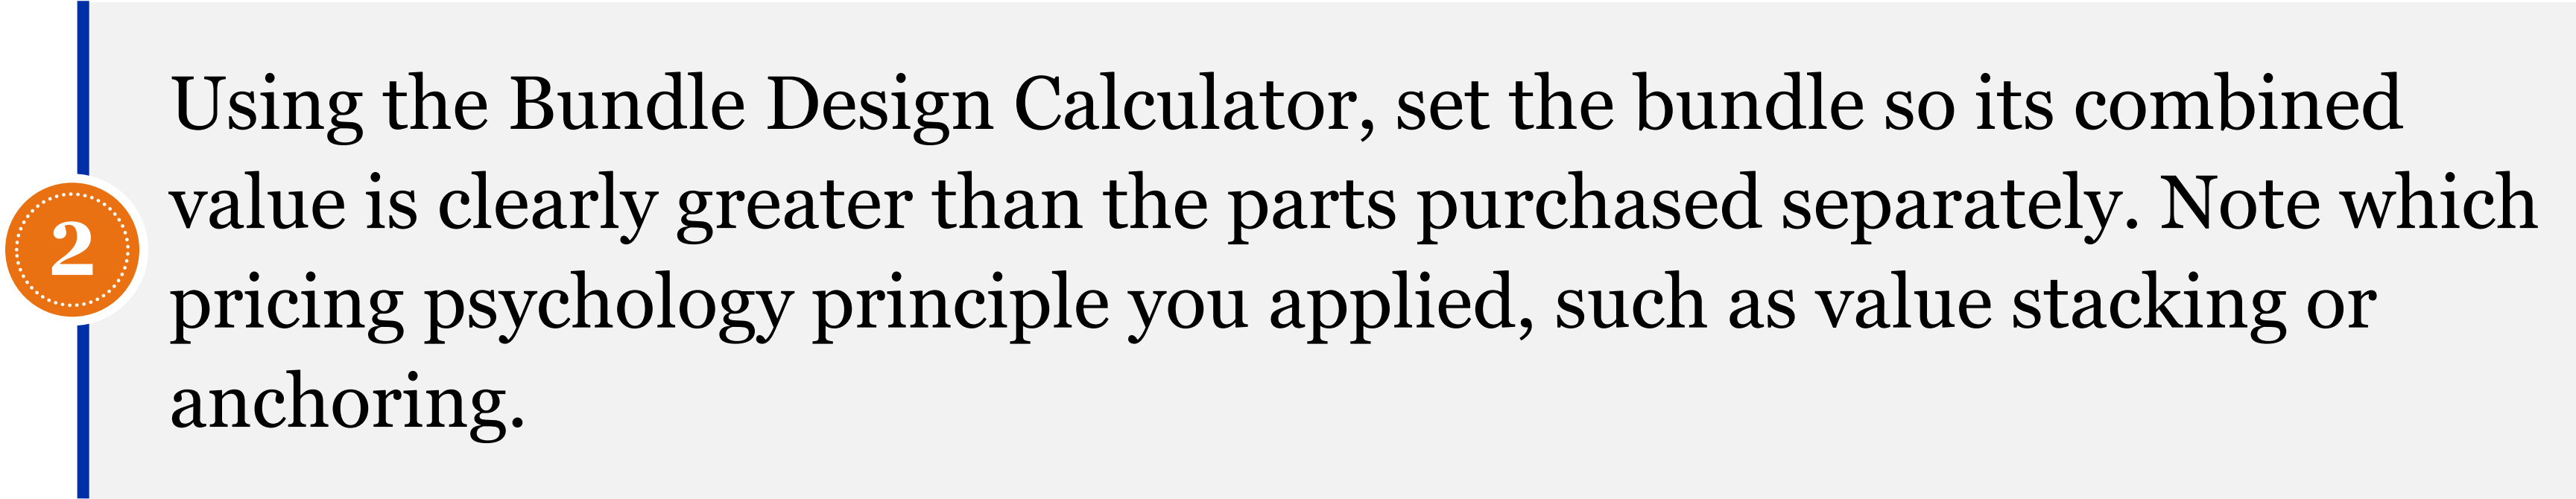

The reading: Pricing Psychology and Proposal Guide.

Instructions

An orange circle with the number 1 inside, positioned to the left of the first instruction box. A blue vertical line runs through the center of the slide, passing through the circles. An orange bracket on the left side connects the two circles.

1

Define the bundle: leadership training combined with team communication workshops for management teams.

An orange circle with the number 2 inside, positioned to the left of the second instruction box. A blue vertical line runs through the center of the slide, passing through the circles. An orange bracket on the left side connects the two circles.

2

Using the Bundle Design Calculator, set the bundle so its combined value is clearly greater than the parts purchased separately. Note which pricing psychology principle you applied, such as value stacking or anchoring.

- 
- 3 Draft a one-sentence value proposition for the bundle.
 - 4 List two or three key ROI metrics the bundle would improve, such as manager effectiveness or team retention.
 - 5 Summarize the bundle on a single page.

Expected Output

A one-page bundle summary including the value proposition and key metrics.

Summary

In this lab, you designed a two-product bundle, applied a pricing psychology principle, and built a concise business case with a value proposition and ROI metrics. Packaging value makes the larger purchase feel like the smarter, easier choice.
