

Final Project: Enterprise Negotiation and Closing Toolkit for Manufacturing

Overview

This capstone project brings together everything you have learned across the course. You will build a complete Enterprise Sales Toolkit for a manufacturing sector deal: six components, submitted as a single PDF portfolio, worth 20 points in total. Before submitting your work and reviewing your peers, please ensure you have completed all the hands-on labs for this course; the labs feed directly into the project components.

One or more of your peers will grade your final assignment. Similarly, you will grade one of your peers who also completed this capstone project. Your peer evaluator will be provided with the tasks and objective grading criteria, so they can determine how many points to assess each component.

Learning Objectives

After completing this lab, you will be able to:

1. Develop an integrated enterprise sales toolkit for a manufacturing deal.
2. Create negotiation, closing, and competitive strategies for complex sales opportunities.
3. Build sales forecasts and post-sale success plans using structured frameworks.
4. Analyze market intelligence to identify opportunities and support sales decisions.

Project Scenario

You are a sales professional pursuing a high-stakes enterprise deal in the manufacturing sector. Choose one manufacturing company as your target account and one main competitor you are selling against. You will use this same company, deal, and competitor across all six components, so that your toolkit describes one coherent opportunity from negotiation through post-sale success. Reviewers can tell the difference between six disconnected documents, and a single, integrated toolkit built around one real-feeling deal.

Project Instructions

Complete the following steps in order. Each component draws on templates and labs you have already completed, so you are assembling and sharpening existing work, not starting from scratch.

Step 1: Set your deal context

Define your target manufacturing account, the product or solution you are selling, the approximate deal size, the buying stakeholders involved, and your main competitor. Write this context down first; every later step depends on it staying consistent.

Step 2: Build Part 1, the Negotiation Plan

Create a complete negotiation strategy for your deal. Include all five elements:

- A stakeholder map with each stakeholder's interests and influence level.
- A BATNA calculation and reservation price.
- A concession strategy with five tradeable issues.
- A coalition-building plan.
- Cultural considerations for a global deal.

Draw on your Negotiation Planning Template and Lab 1.1 for the core plan, Lab 4.1 for the coalition plan, and the Cultural Adaptation Guide for the cultural considerations.

Step 3: Build Part 2, the Closing Playbook

Create a situational closing guide for your deal. Include all five elements:

- Ten closing techniques, each with the situation where it fits best.

- A buying-signal identification guide.

- Urgency-creation strategies based on legitimate business drivers.

- Common hesitations and your prepared responses.

- A post-close momentum plan.

Draw on Lab 1.2 and the Closing and Post-Close Playbook reading.

Step 4: Build Part 3, the Competitive Battle Card

Create a field-usable battle card against your chosen competitor.
Include all five elements:

- A SWOT analysis of the competitor.

- Differentiation messaging.

- Five fair trap questions.

- Win/loss insights.

- Positioning statements.

Draw on your competitor profile from Lab 2.2, your battle card from Lab 2.3, and the Battle Card Template. Keep the trap questions fair: each should target a real difference, not a made-up flaw.

Step 5: Build Part 4, the 90-Day Forecast Model

Create a probability-weighted revenue forecast for a pipeline that includes your deal. Include all five elements:

- A pipeline analysis with stage probabilities.

- Best-case, likely, and worst-case scenarios.

- Key risk factors.

- Coverage-ratio calculations.

- Improvement opportunities.

Draw on Lab 3.2 and the Forecast Accuracy Tracker.

Step 6: Build Part 5, the Post-Sale Success Kit

Create the transition materials for the deal after signature. Include all five elements:

- A handoff checklist.

- Success-criteria documentation.

- A first-30-days plan.

- Key metrics for account health.

- Escalation protocols.

Draw on the Handoff Checklist Template and the transition plan you built in Lab 1.2.

Step 7: Build Part 6, the Market Intelligence Brief

Create an analysis of the manufacturing sector that supports your deal strategy. Include all five elements:

- Three key manufacturing-sector trends.

- The impact of each trend on your sales strategy.

- Opportunity identification.

- A threat assessment.

Recommended actions.

Draw on Lab 2.1 and the Market Research Methodology reading.
Ground every trend in a verifiable source.

Step 8: Assemble your portfolio

Combine all six components into a single PDF, no more than 30 pages. Label each component clearly. Add a brief executive summary at the front that introduces the deal and the toolkit. Use professional formatting throughout. Before submitting, check the toolkit against one standard: could you actually use it in a real sales situation?

Step 9: Submit and complete your peer review

Upload your portfolio through the six submission prompts below; one file upload per component (you may upload the full portfolio to each prompt if the platform requires a file per prompt; make sure each component is clearly labeled and easy to find). Then complete your assigned peer review using the grading criteria provided.

Summary

This capstone project brings together everything you've learned to create a complete **Enterprise Sales Toolkit** for a manufacturing-sector deal. Using one target account, a consistent deal scenario, and a key competitor, you'll develop six integrated components covering negotiation, closing, competitive strategy, forecasting, post-sale success, and market intelligence. Compile your work into a professionally formatted PDF and submit it for peer review.
