

Lab 1.2: Create a Multi-Channel Outreach Sequence

Introduction

In this lab, you will translate your Ideal Customer Profile (ICP) into a cohesive, multi-channel outreach sequence. Rather than treating calls, emails, and social outreach as isolated activities, you will design a coordinated sequence where each touchpoint reinforces the others.

This lab builds directly on Lab 1.1. You will use the same company context (ProClean Commercial Services) and apply what you learned about ICPs to create targeted and relevant outreach that feels intentional rather than random.

The goal is not volume. The goal is relevance and continuity.

Learning Objectives

By the end of this lab, you will be able to:

- Design a coordinated multi-channel outreach sequence that maintains consistency across touchpoints.
- Adapt messaging appropriately for different channels (call, email, and LinkedIn).
- Create an outreach that references specific business context rather than generic value propositions.
- Structure messages that invite dialogue rather than demand commitment.

Scenario

Company Name: ProClean Commercial Services

Industry: Commercial office cleaning and janitorial services

**Target Persona: Office Managers at growing companies
(20-200 employees)**

Persona Responsibilities:

- Workplace cleanliness oversight.

- Vendor coordination and management.

- Supporting employee health and safety initiatives.

Common Concerns:

- Increased foot traffic as teams grow.
- Rising employee expectations around health and hygiene.
- Managing vendors without adding operational burden.
- Budget pressure while maintaining service quality.

Tools and Resources Required

You will need the following to complete this lab:

A word processor or plain text editor (Microsoft Word, Google Docs, or similar) for drafting your three outreach messages.

Your completed ICP Profile from Lab 1.1. This is the required input for Steps 1 and 2 and defines the persona, business challenges, and structural fit indicators your outreach will reference.

The Scenario details provided in this lab (ProClean Commercial Services and the Office Manager persona).

No external platforms, accounts, datasets, repositories, or configuration files are required. All three touchpoints are drafted as written text, so you do not need live access to a phone system, an email client, or LinkedIn to complete the exercise.

Visual Reference: The Three-Touch Sequence

The table below shows the structure of the sequence you will build. Use it as a quick reference while drafting each message.

Touch	Channel	Purpose	Target Length
1	Cold call opener	Open the conversation, ask permission, and raise one specific business issue	3-4 sentences
2	Follow-up email	Reinforce the same core issue with a contextual subject line and a low-friction question	4-5 sentences maximum
3	LinkedIn connection request	Establish a professional connection around the same thematic area, with no pitch	1-2 sentences

Activity Steps

Exercise 1: Create a Three-Touch Outreach Sequence

Step 1: Review Your ICP from Lab 1.1

Before creating your outreach sequence, review the ICP you developed in Lab 1.1. Consider which specific business challenges and structural fit indicators are most relevant to Office Managers at growing companies.

Step 2: Answer Three Planning Questions

Before writing any outreach, answer these questions to ensure relevance:

Why this persona? (Why is an Office Manager the right contact?)

Why this issue? (Which problem from your ICP is most pressing?)

Why now? (What signal or trigger makes this timely?)

Step 3: Draft Your Cold Call Opener

Create a brief cold call opener that:

- Acknowledges the interruption and asks for permission.

- References a specific business context (growth, expansion, and hiring).

- Asks a question rather than pitches services.

- Keeps the focus on their situation, not your solution.

Target length: 3-4 sentences

Step 4: Draft Your Follow-Up Email

Create a follow-up email that:

- Uses a specific, contextual subject line.

- References the same core issue from your call.

- Respects their time and acknowledges timing may not be right.

- Includes a low-friction call to action (a question, not a meeting request).

Target length: 4-5 sentences maximum

Step 5: Draft Your LinkedIn Connection Request

Create a LinkedIn connection request that:

- References your professional context briefly.

- Mentions the same thematic area (workplace cleanliness, employee health).

- Avoids sales language or pitching.

- Keeps the request to 1-2 sentences.

Step 6: Review for Consistency

Read all three messages together. Do they feel like part of a coordinated effort, or do they feel disconnected? Each message should make sense on its own while reinforcing the same core relevance when viewed as a sequence.

Success Criteria

A strong submission will:

- Maintain consistency in the core business issue across all three touchpoints.

- Adapt tone and length appropriately for each channel.

- Avoid generic language or vague value propositions.

- Invite conversation rather than request meetings or demos.

- Demonstrate understanding that outreach is about relevance, not volume.

Lab Output / Expected Outcome

By the end of this lab, you should have produced the following outcomes:

- Written answers to the three planning questions (why this persona, why this issue, why now).
- A cold call opener of 3-4 sentences grounded in specific business context.
- A follow-up email of 4-5 sentences with a contextual subject line and a low-friction call to action.
- A LinkedIn connection request of 1-2 sentences that is free of sales language.

The lab is successfully complete when all three messages reference the same core business issue drawn from your Lab 1.1 ICP, are adapted in tone and length for their channel, read as a coordinated sequence rather than three disconnected messages, and meet the Success Criteria listed above.

Summary

In this lab, you translated the Ideal Customer Profile you built in Lab 1.1 into a coordinated three-touch outreach sequence spanning a cold call, a follow-up email, and a LinkedIn connection request. You practiced anchoring every message to one specific business issue, adapting tone and length to fit each channel, and inviting dialogue instead of demanding commitment.
